

**CLINICAL AND ENDOSCOPIC STUDY OF NEW
TECHNIQUE OF LIPOPLASTY -VIDEO**

Dr. Hassan El Tazi

(Morocco)

Abstract:

The advantages of Ultrasonically Assisted Lipoplasty ;

- The ability to remove large volumes of fat aspirates in a single session (3-10 L)
- Increased skin envelope tightening by contraction and retraction
- Improved sculpturability
- Decreased surgeon's fatigue
- Reduce operative time

The advantages of Endermologie in Lipoplasty are :

1) Intra-operatively

- Harmonizes and regularizes cutaneous appearance
- Facilitates reabsorption edemas and ecchymosis
- Augments cutaneous circulation
- Help in retraction of cutaneous tissue
- Facilitates reabsorption of liquids used for tumescent liposuction

2) In Immediate Post-operative (1 to 7 days)

- Simplifies the after effects of the operation
- Optimizes results; long term (3 to 5 weeks) with endermologie
- Facilitates the drainage of edema
- Eliminates the (cardboard) appearance of the skin
- Harmonizes the treated area
- tones the ski

Endoscopic (In Vivo) Clinical Views

1. Wetting/infiltration
2. Traditional liposuction
3. ultrasonically Assisted lipoplasty with various machines
4. Endermologie

In view of the preliminary results, the ultrasonically and endermologie assisted lipoplasty decrease the inconveniences and enhance the advantages of lipoplasty.

The video will present the advantages of EAL (these new technique)

The prediction of the authors : When the final results are obtained these technique of lipoplasty will be regarded as complimentary.

DIGEST : The following are the advantages of ultrasonically and the endermologie assisted lipoplasty :

- 1) The ability to remove large volumes of fat aspirates in a single session (3-10 litres)
- 2) Increased skin envelope tightening by contraction and retraction
- 3) Improved sculpturability
- 4) Decreased surgeon's fatigue
- 5) Reduced operative time
- 6) Harmony of the skin

It is the authors prediction that when technological goals are met, ultrasonically assisted lipoplasty and the endermologie will all but replace traditional liposuction.
